

Command to Show Only the Uptime Duration

Command:

`uptime -p`

Explanation:

- Displays how long the system has been running
- `-p` means *pretty format* (only uptime duration)

Note (Screenshot):

Run this command on your terminal and attach the screenshot of the output.

What is grep?

grep (Global Regular Expression Print) is a text-search utility used to search for specific words or patterns in files or command output.

Create a States File Using cat Command

Command:

```
cat > states.txt
Andhra Pradesh
Sikkim
Madhya Pradesh
Gangtok
Arunachal Pradesh
Kerala
Uttar Pradesh
West Bengal
Nepal
Himachal Pradesh
```

(Press Ctrl + D to save the file)

Find the Word "pradesh" Using grep

Command:

```
grep "Pradesh" states.txt
```

Expected Output:

- Andhra Pradesh

- Madhya Pradesh
- Uttar Pradesh
- Himachal Pradesh

Note (Screenshot):

Run the grep command on your terminal and attach the screenshot of the output.

Differentiate Between tail and syslog

tail	syslog
Linux command	Logging mechanism
Used to view end of a file	Used to collect and manage system logs
Example: tail -f /var/log/syslog	Stores logs from system services
Helps in real-time log monitoring	Helps in centralized logging

Can You Run iostat Without Installing a Package?

Answer: No

Justification:

- iostat is part of the sysstat package
- It is not installed by default on most Linux systems
- You must install it first

Example:

- Ubuntu/Debian: `sudo apt install sysstat`
 - RHEL/CentOS: `sudo yum install sysstat`
-

Summary:

Commands like uptime, grep, and tail help in monitoring and troubleshooting, while tools like iostat require additional packages for system performance analysis.
